TECHNICAL SKILLS

Progamming Languages

- C
- C#
- python

AI/ML Frameworks

- Tensorflow
- PyTorch
- LangChain
- LangGraph
- n8n
- pandas
- Sklearn
- spacy
- open cv

Web Development

- HTML
- javascript
- css
- React Js
- Next Js
- Node Js
- Express Js
- flask
- fastAPI
- ASP.NET core

Databases

- MongoDb
- MySql
- Redis
- Mssql
- Pinecone

ABOUT ME

I am a final year undergraduate student at the Faculty of Information Technology, University of Moratuwa, specializing in machine learning and artificial intelligence. I am on the verge of completing my internship and am now seeking an Associate AI Engineer role to apply my full-stack and AI skills to solve complex challenges and contribute to innovative IT solutions.

EDUCATION

University of Moratuwa

B.Sc. (Hons) in Information Technology 2022 - 2026

- currently 3.81 out of 4.0 GPA up to now
- Dean's list level 2 semester 1 - 4.0 SGPA
- Dean's list level 2 semester 2 - 3.9 SGPA

Sivali Central Collage

Physical Science - IT stream Z score - 2.5768 2012 - 2020

- Combined Maths - A
- Physics - A
- ICT - A

EXPERIENCE

Intern Software Engineer : (R&D)

Creative Software 2025 March - Present

- .NET
- Langchain

PROJECTS

Tea Farming Support Assistant : Full stack & ML developer

Developed an AI-powered modular multi-agent architecture where a central FastAPI-based service classifies queries using an LLM to specialized services.

- Disease Service – Retrieval-augmented generation using Pinecone vector DB and web search for pest/disease diagnosis.
- Fertilize Service – Personalized fertilizer recommendations using weather APIs, tea land data, historical fertilization records, and a mock ML model
- Help Service – Company policy and FAQ retrieval using Pinecone vector DB
- Integrated LangChain & LangGraph for agent orchestration, Next.js for the frontend

Technologies: FastAPI, Next.js, LangChain, LangGraph, Pinecone, Scikit-learn, Pandas, DuckDuckGo API, Weather API

Tomato Disease Detector : Full stack & ML developer

Built an AI system using computer vision and machine learning to detect and prevent crop diseases from images of tomato leaves

- Visualized results with Matplotlib to ensure transparency and accuracy developed models in TensorFlow for disease identification
- Integrated FastAPI for backend and React.js for the frontend

Technologies: TensorFlow, Matplotlib, FastAPI, React Js

Cloud services

- Azure

Others

- Git
- Docker
- Zapier
- Figma
- Jest
- Playwright

NON TECHNICAL SKILLS

- Team work
- Self learning
- Adaptability
- Problem solving
- commiunication
- Creativity

EXTRA CARICULAM ACTIVIYIES

- Member of Robotics & Automation Society web development team
- Volunteer Member of Young Zoologists Association of Sri Lanka
- Member of IoT & Embedded Systems Labs

CERTIFICATIONS

- AI/ML Engineer -Stage 1 & 2 (SLIIT)
- Neural Networks and Deep Learning
- Gen AI with Transformers
- Fundamentals of AI Agents Using RAG

LANGUAGES

- SINHALA
- ENGLISH

NER Recognization Model : ML developer

Implemented a Named Entity Recognition (NER) system for detecting entities like persons, organizations, locations, and phone numbers in text data. Leveraged the CoNLL++ dataset for training and evaluation, comprising tokenized text with associated part-of-speech tags, chunking tags, and NER tags. Utilized the Hugging Face Transformers library for tokenization, model training, and inference

- Model - DistilBERT, Sklearn,pandas

Automated Bone Fracture Detection : ML developer

Developed an AI-powered system for detecting bone fractures from X-ray images using CNNs with TensorFlow. Implemented data augmentation and model optimization, experimented with transfer learning models like EfficientNetB3 and VGG16, and identified the best-suited model for reliable fracture classification.

- Model -TensorFlow, Keras

Iphone price predict application : Full stack & ML developer

Developed a machine learning-powered app to predict iPhone prices based on factors like model, memory capacity, and features, providing users with accurate price estimates according to sri Lankan market

- Utilized polynomial regression for price prediction, incorporating feature engineering and data cleaning to optimize model performance
- Built backend with Flask and integrated machine learning models using Pandas and Scikit-learn

Technologies: Flask, Pandas, Scikit-learn, React Js

Green Haven - Group Project : Full stack developer

A university project developing an e-commerce platform for a plant shop.

- Customer Portal: Smooth browsing, cart management, secure checkout, and real-time order tracking
- Admin Dashboard: Product and category management, order monitoring, and performance insights
- Payment Integration: Secure transactions using Stripe
- Optimized Performance: Microservices ensure modularity and independent scalability
- Authentication is implemented using OAuth with session management handled by Redis

Technologies Used: NodeJS, ReactJS, Docker, MSSQL, Redis, gRPC ,RabbitMq

Studio Management System : Mentored by Optimize Solutions Group (Group leader) **:** Full stack developer

As a full stack developer developed a comprehensive system to streamline studio operations comprising three applications

- Customer Portal: Facilitates seamless bookings
- Manager Dashboard: POS, Manages inventory, events, and employee oversight
- Mobile App: Provides staff with on-the-go access to essential functionalities
- Handled both backend and frontend project architectures using a project management tool to ensure streamlined development processes

Technologies: React Js, Next Js, Material Tailwind, Node Js, MSSQL, Flutter, Socket.io

ACHIEVEMENTS AND PARTICIPATIONS

- HackX-University of Kelaniya(2023) - Finalist (top 10)
- SLIOT - University of Moratuwa(2024) - Finalist (top 10)
- Data Storm - University of Moratuwa(2023)
